

ABSTRACT OF THE DISCLOSURE

A multi port air filter for fuel injected engines provides for the installation of the air filter into the air intake line of an air intake system of a fuel injected engine. The multi port air filter has several filtering elements including an outside filter screen, a foam filter, and inside filter screen, a foam filter mesh, and a mesh filter. The foam filter is made from a flexible reticulated polyurethane foam material that allows proper air flow while maintaining good filtering capability.
